Step 6 - Failed

Command:

verify text "You logged out of the secure area!" in "id=flash"

Details:

Error: Element or text not found within 10 seconds

AI Assistant Suggestion:

Probable Cause:
*The test is attempting to verify the presence of a *logout confirmation message*. The error indicates this message never appeared. This strongly suggests that the test script never successfully logged in and subsequently logged out. The failure is not in the verification step itself, but in a preceding step (e.g., the login attempt) that is not shown.*

Suggested Fix:
*1. **Verify the Login Step:** Review the test steps prior to this command. Ensure that the script is successfully entering the correct credentials (`tomsmith` / `SuperSecretPassword!`) and clicking the "Login" button.*
*2. **Add Intermediate Waits/Assertions:** After the login action, add an explicit wait to confirm the secure area page has loaded (e.g., wait for the "Logout" button to be visible) before attempting to click it. This will make the test more robust and help pinpoint if the login is the step that's truly failing.*
